Asset overview

BitGo USD1 (USD1) is a fiat-backed stablecoin designed to maintain a 1:1 value with the U.S. Issued and managed by BitGo, USD1 enables digital payments, settlement, and liquidity management across blockchain networks. USD1 is built to support institutional use cases by combining blockchain efficiency with regulatory compliance, custody, and transparency standards.

At a glance

Platform	BitGo	Instrument	Reserved Bank Digital Currencies
Networks	Ethereum, BNB Smart Chain, Solana, Mantle, plume, aptos	DSIN	DSIN-30281315

DTS summarizes reported transparency. It is not a credit rating, investment recommendation or guarantee of safety.

Activity snapshot

Metric	Reported value	30-day change
Reported TVL	946,444,582.82 USD	0.00 %
On-chain transfer value	4,007,009.77 USD	+2,391.59 %
Holder addresses	185	-99.98 %
Transfer events	7,663	+690.82 %
Mints / issuance value	0.28 USD	-96.85 %
Burns / redemption value	0.00 USD	0.00 %
Active wallets / senders	924	+740.00 %

Network allocation is unavailable pending reconciliation with the consolidated value.

Latest recorded trade

Price as reported	Quantity	Trade time
0.9994920000000000	8,130.38159	2026-11-18 23:12

A recorded trade is separate from the reference spot price. Currency and time zone follow the source.

About this snapshot

Sources: DORRS registry and blockchain analytics; CoinGecko reference pricing. Collected 2026-11-23 13:00 UTC. Source timestamps may differ. Missing values remain unavailable.

Transfer value measures on-chain movement, not exchange trading volume. Holder addresses are not unique investors. TVL, deployment value and token market cap are separate measures. Reported changes use the source's comparison period; a reported 0% does not establish that a prior-period observation exists. Cross-network values may include bridged representations.
