Collection completed: 2026-10-20 05:44:19.756 UTC

ASSOCIATED SYMBOLS	NETWORK TOTAL VALUE	ASSOCIATED GLOBAL MARKET CAP*
1,990	N/A	$304,253,533,693.45

VALUE COVERAGE	NATIVE / NETWORK SYMBOL	NETWORK MARKET-CAP SHARE
1632 / 1990	SOL	Not available

*Sum of available global market caps for associated symbols (758 of 1990). This is not capital located on Solana. Network Total Value sums network-specific API values and is not market capitalization.

Network overview

Solana’s official site identifies the network as a high-performance blockchain for internet capital markets, payments, and crypto applications, and its tokenization page frames the network around tokenizing equities, debt, stablecoins, and real-world assets. This confirms the featured blockchain identity as Solana, matching the DORRS observed network coverage labeled “Solana.” The website positioning is a Solana claim, not independent validation; DORRS separately observes coverage across equity, debt, stablecoin, fund interest, active strategies, commodity, network token, and platform asset classes. Official pages do not, by themselves, establish regulatory status, issuer solvency, asset backing, or investment merit. [1]

Solana’s architecture is described in its whitepaper as a blockchain design using Proof of History to create a verifiable ordering of events, alongside Proof of Stake consensus. The paper describes a leader that sequences user messages and executes transactions, with verifier nodes re-executing transactions and publishing confirmations used as consensus votes. For settlement, Solana documentation claims tokenized assets can use delegation-based delivery-versus-payment in a single transaction or a Solana Foundation-maintained DvP program using program-owned escrow accounts. These are documented mechanisms and website claims; missing from the reviewed official pages is an independent assurance that any specific DORRS-observed asset uses those settlement paths. [2]

Solana’s tokenization tooling is documented around SPL tokens, token programs, mint accounts, token accounts, and the Token Extension Program, which adds configurable features beyond the original token program. The official asset-issuance

documentation describes Token Extensions for metadata, pausability, permanent delegates, frozen-by-default accounts, allowlist or blocklist controls, delivery-versus-payment, and money-market-fund NAV operations. Solana’s tokenization page names example product categories and products including stablecoins, BENJI, and Apollo’s ACRED private credit fund through Securitize, while DORRS observes additional Securitize-labeled tokenized equities such as MSFTS, METAS, TSLAS, and AAPLS. The reviewed official pages did not verify those individual DORRS-listed equity tickers. [3]

Top 20 symbols

One combined selection: highest positive FDV proxy, then market cap, then total supply. Showing 20 of 1990 associated symbols. The ranking value is bold.

#	Symbol / security / issuer	FDV proxy*	Market cap*	Total supply*	Price*	Circulating supply*
1	**USDT** Tether USD Tether | Stablecoin	**$183,545,837,644.45**	$183,545,837,644.45	103,409,118,315.83	$1	183,665,036,252.98
2	**USDC** USDC Circle Internet Financial LLC | Network Token	**$72,066,612,992.63**	$72,066,612,992.63	81,970,528,679.77	$1	72,069,567,844.91
3	**LINK** Chainlink Chainlink Labs | Network Token	**$9,140,851,647.46**	$9,140,851,647.46	1,013,825,958.37	$11.92	766,849,970.42
4	**USDE** Ethena USDe Ethena | Stablecoin	**$4,679,582,555.99**	$4,679,582,555.99	5,562,868,416.25	$1	4,682,555,979.04
5	**USD1** BitGo USD1 BitGo | Stablecoin	**$4,023,432,518.75**	$4,023,432,518.75	4,971,758,967.93	$1	4,026,778,771.91
6	**XAUT** Tether Gold Tokens XAUT Tether | Commodity	**$3,359,609,079.36**	$3,359,609,079.36	712,747.09	$4,152.82	808,994.63
7	**USDG** Paxos Global Dollar Paxos | Stablecoin	**$3,095,022,563.9**	$3,095,022,563.9	1,345,034,258.09	$1	3,095,022,563.9

Data sources and methodology

DORRS Get Symbol List establishes membership through associated_network and deployed-token network keys. network_profiles is a directory and is not treated as membership. Symbol IDs are deduplicated; ambiguous duplicate tickers block publication.

DORRS Blockchain Analytics and Market Data supplies financial values for each associated symbol, including those without issuers. Collection began 2026-10-20T05:25:40.102Z and completed 2026-10-20T05:44:19.756Z. Requests are sequential observations, not a simultaneous snapshot. Research completed 2026-10-20T05:44:41.241Z.

FDV proxy uses total_value as requested: summed total supply multiplied by the effective price across all networks. It is not a separately reported fully diluted valuation based on maximum supply. token_market_cap and token_price are CoinGecko global values. The API uses zero when CoinGecko data is unavailable; these zeros are displayed as N/A. Total Value may use manual/NAV or underlying reference prices, so it need not equal total_supply times token_price. Circulating supply is displayed only if supplied explicitly and is never inferred.

Network Total Value sums total_value_by_network for the featured network across the full associated-symbol list, not merely the top 20. The API omits zero-valued entries; an absent network entry in a returned map contributes zero. A missing map is unknown and prevents a complete total. Known network value: $298,761,231,671.91; coverage 1632/1990. Global market caps can overlap between network reports and must not be added across networks. Network market-cap share is unavailable because this response does not allocate global caps to networks.

Positive FDV proxies rank first, highest to lowest; remaining places use positive market caps, then positive total supplies. Each symbol appears once. Symbols with no positive ranking value are omitted. No cross-token supply total is computed because token units differ. Asset classifications are DORRS-reported. Website statements are AI-assisted summaries of cited official sources. This report provides information, not investment recommendations.
