Data captured: 2026-10-08 14:31:29.955 UTC

TOTAL SYMBOLS

2,794

TOTAL MARKET CAP

\$47,981,696.7

FULLY DILUTED VALUATION (FDV)

\$108,722,150.36

MONTHLY TRANSFER VOLUME

\$3,359,616,639.45

ACTIVE NETWORKS

7

HOLDER COUNT

908

Issuer overview

Reality is confirmed as Bitget's real-world-asset issuance platform for rTokens, not the separate Bitget Stock+ brokerage-style product or Bitget's BGB utility token. Bitget describes Reality as the issuing platform for onchain representations of publicly traded equities and ETFs, integrated into Bitget's broader trading ecosystem and Bitget Wallet. The official pages reviewed substantiate Reality/rToken coverage for tokenized U.S. stocks and ETFs; they do not independently substantiate all DORRS-observed asset classes such as commodities, debt instruments, or stablecoin-labeled examples under the Reality issuer identity. [1]

Bitget states that rTokens provide economic exposure to corresponding U.S. stocks or ETFs, with underlying securities held through brokerage and custody infrastructure, and says holders may receive eligible cash dividends while corporate actions such as distributions and stock splits are synchronized. Bitget's rToken campaign and wallet pages describe trading with USDT, fractional access, market and limit orders in wallet flows, use in Bitget spot and futures contexts, and possible use as futures margin or within Earn-related scenarios. Missing from the reviewed official materials is a definitive issuer-level list matching every example symbol supplied in DORRS. [2]

On blockchain support, Bitget's own wallet article says Reality rTokens are represented and traded on blockchain networks and that Bitget Wallet can route supported assets across networks, while a Bitget support announcement specifically names Arbitrum and Morph for the initial onchain launch. DORRS observed broader network coverage across BSC, Ethereum, HyperEVM, Mantle, Optimism, Arbitrum, and Solana; that should be treated as observed network coverage rather than fully confirmed issuer documentation from the reviewed Bitget pages. The official materials reviewed do not clarify whether Reality itself natively issues on every DORRS-observed network. [3]

AI-assisted summary of official website sources. DORRS metrics and classifications are shown separately.

Blockchain footprint

Market cap distribution

Market-cap distribution is not available: explicit per-network market caps are missing or do not reconcile with the issuer total. Reported network values below are retained with their original meaning.

Value by blockchain

Blockchain	Symbols	Market cap	Market share	API network value
algorand	0	\$0	Not available	\$0
aptos	0	\$0	Not available	\$0
avalanche	0	\$0	Not available	\$0
base	0	\$0	Not available	\$0
bsc	1	\$0 1 unvalued instrument(s)	Not available	\$0
celo	0	\$0	Not available	\$0
ethereum	2	\$0 2 unvalued instrument(s)	Not available	\$0
fraxtal	0	\$0	Not available	\$0
gnosis	0	\$0	Not available	\$0
hedera	0	\$0	Not available	\$0
hyperevm	1	\$0 1 unvalued instrument(s)	Not available	\$0
linea	0	\$0	Not available	\$0
mantle	1	\$0 1 unvalued instrument(s)	Not available	\$0
mantra	0	\$0	Not available	\$0
near	0	\$0	Not available	\$0
optimism	1	\$0 1 unvalued instrument(s)	Not available	\$0
plume	0	\$0	Not available	\$0

Blockchain	Symbols	Market cap	Market share	API network value
polygon	0	\$0	Not available	\$0
sei	0	\$0	Not available	\$0
stellar	0	\$0	Not available	\$0
sui	0	\$0	Not available	\$0
xdc	0	\$0	Not available	\$0
xrpl	0	\$0	Not available	\$0
zksync	0	\$0	Not available	\$0
arbitrum	2,792	Not available 2787 unvalued instrument(s)	Not available	\$47,981,696.7
solana	2	Not available 2 unvalued instrument(s)	Not available	\$0

Network symbol counts are derived from unique instruments associated with each network. A multi-chain instrument can appear in more than one row. Network market caps use explicit aggregates or the sum of explicit token-network market caps. Unvalued instruments may contribute reported zero values; the coverage note identifies them.

Top 20 instruments

Highest positive FDV first; remaining places by market cap, then total supply. Showing 20 of 2,794 issuer instruments. The value used for ranking is bold.

Rank	Instrument	FDV	Market cap	Total supply
1	RGOOGL Alphabet rStock	\$19,205,362.49	\$6,591,023.41	55,654.81
2	RINTC Intel rStock	\$13,148,203.79	\$7,355,922.89	116,232.35
3	RCRCL Circle rStock	\$12,952,720.4	\$13,238,551.06	161,485.11
4	RMSTR MicroStrategy rStock	\$11,493,611.29	\$10,788,370.32	73,526.17
5	RSPCX SpaceX (Reality Protocol)	\$11,198,436.07	\$3,286,302.39	66,728.85
6	RTSLA Tesla Bitget	\$8,052,161.62	Not available	19,223.46
7	RBAX Baxter International Inc. Bitget	\$7,160,974.23	Not available	327,563.52
8	RMETA Meta Bitget	\$6,226,366.1	Not available	8,632.03
9	RNVDA Nvidia Bitget	\$4,541,603.26	Not available	19,598.68
10	RAMD Advanced Micro Devices Bitget	\$3,602,645.37	Not available	5,578.06
11	RQQQ Invesco QQQ Trust Bitget	\$3,289,880.01	Not available	4,341.76
12	RHOOD Robinhood Markets Bitget	\$1,746,751.54	Not available	15,950.61
13	RMSFT Microsoft Bitget	\$1,473,387.16	Not available	2,781.24
14	RSPY SPDR S&P 500 ETF Bitget	\$882,111.16	Not available	1,134.96
15	RORCL Oracle Bitget	\$879,789.85	Not available	6,128.38
16	RAAPL Apple Bitget	\$782,002.33	Not available	2,322.76
17	RAMZN Amazon.com Bitget	\$762,120.96	Not available	2,932.14
18	RCOIN Coinbase Global Bitget	\$448,583.82	Not available	448,583.82
19	RMARA MARA Holdings Bitget	\$156,500.28	Not available	15,106.2
20	RSNOW Snowflake Bitget	\$155,537.86	Not available	467.29

Data source and methodology

DORRS issuer API: [Get Issuer Info](#). Data captured 2026-10-08T14:31:29.955Z. Website research completed 2026-10-08T14:31:46.576Z. Values are point-in-time observations, not historical reconstructions.

Market cap, FDV, circulating supply and status are shown only when provided explicitly by the API. Not available does not mean zero. One combined table shows at most 20 instruments. Positive FDV values rank first, highest to lowest. If fewer than 20 instruments have positive FDV, remaining places are filled with positive market caps among the remaining instruments, highest first, then positive total supplies. Zero, missing or invalid values trigger the next metric; instruments with no positive value are omitted. Each instrument appears once, with symbol as the tie-breaker within a tier. No mixed-token supply grand total is computed because units differ. Holder counts are as reported by DORRS; they are not asserted to be unique people. Monthly transfer volume is the API-reported monthly measure.

Network market-cap shares are shown only when every network value is available and the sum reconciles to the issuer market cap within 0.1%. Token-network details supply explicit market caps when a separate aggregate is absent. Availability flags identify unvalued instruments, including reported zero contributions. Legacy per_network values remain separate API-reported values and are not used to infer market cap.

Asset classes: Commodity, Debt, Equity, Stablecoin. Website statements describe the issuer's published claims and may differ from DORRS classifications. This report is informational research and does not recommend an investment.
