DORRS DATA

Weekly issuer & platform report

Tether

https://tether.to/

Data captured: 2026-10-12 12:00:58.819 UTC

TOTAL SYMBOLS	TOTAL MARKET CAP	FULLY DILUTED VALUATION (FDV)
3	$187,479,187,926.88	$105,428,865,711.88

MONTHLY TRANSFER VOLUME	ACTIVE NETWORKS	HOLDER COUNT
$1,008,629,557.18	13	27,961,231

Issuer overview

Tether’s official materials identify “Tether” as Tether Operations, S.A. de C.V., while distinguishing Tether Gold as TG Commodities, S.A. de C.V.; this confirms the featured platform is the Tether token issuer ecosystem rather than an unrelated parent-company product. The site describes Tether Tokens as blockchain-based assets used to represent supported fiat currencies and commodities, with current FAQ language naming USD, Mexican peso, and gold as supported through USD₮, MXN₮, and XAU₮. Alloy by Tether is presented separately as a platform where aUSD₮ was minted using XAU₮ as collateral, but the official Alloy page also indicates users were required to return aUSD₮ and remove XAU₮ by September 17, 2026, so ongoing availability is not confirmed here. [1]

Tether’s official supported-protocols page says Tether tokens exist across multiple blockchains and lists currently supported integrations including Ethereum, Avalanche, BNB Smart Chain, Kava/Cosmos, Celo, Kaia, Tron, Liquid, Solana, Polkadot AssetHub, Tezos, Near, Ton, and Aptos; it also states that several legacy protocols, including Omni, Bitcoin Cash SLP, EOS/Vaulta, Algorand, and Kusama, are historical or deprecated for issuance/redemption purposes. DORRS observed coverage overlaps with official support on Ethereum, Avalanche, Celo, Near, and Solana, but DORRS also observes Fraxtal, Gnosis, Linea, Mantle, Mantra, and Sei, which were not confirmed in the cited official Tether supported-protocols page. [2]

AI-assisted summary of official website sources. DORRS metrics and classifications are shown separately.

Blockchain footprint

Market cap distribution

Market-cap distribution is not available: explicit per-network market caps are missing or do not reconcile with the issuer total. Reported network values below are retained with their original meaning.

Value by blockchain

Blockchain	Symbols	Market cap	Market share	API network value
ethereum	3	$187,479,187,926.89 1 unvalued instrument(s)	Not available	$187,479,187,926.88
avalanche	1	$184,092,315,728.5	Not available	$184,092,315,728.5
celo	1	$184,092,315,728.5	Not available	$184,092,315,728.5
fraxtal	1	$184,092,315,728.5	Not available	$184,092,315,728.5
gnosis	1	$184,092,315,728.5	Not available	$184,092,315,728.5
linea	1	$184,092,315,728.5	Not available	$184,092,315,728.5
mantle	1	$184,092,315,728.5	Not available	$184,092,315,728.5
mantra	1	$184,092,315,728.5	Not available	$184,092,315,728.5
near	1	$184,092,315,728.5	Not available	$184,092,315,728.5
sei	1	$184,092,315,728.5	Not available	$184,092,315,728.5
solana	1	$184,092,315,728.5	Not available	$184,092,315,728.5
algorand	0	$0	Not available	$0
aptos	0	$0	Not available	$184,092,315,728.5
arbitrum	0	$0	Not available	$0

sui	0	$0	Not available	$0
xdc	0	$0	Not available	$0
xrpl	0	$0	Not available	$0
zksync	0	$0	Not available	$0

Network symbol counts are derived from unique instruments associated with each network. A multi-chain instrument can appear in more than one row. Network market caps use explicit aggregates or the sum of explicit token-network market caps. Unvalued instruments may contribute reported zero values; the coverage note identifies them.

Top 20 instruments

Highest positive FDV first; remaining places by market cap, then total supply. Showing 3 of 3 issuer instruments. The value used for ranking is bold.

Rank	Instrument	FDV	Market cap	Total supply
1	**USDT** Tether USDt	**$102,394,991,003.11**	$184,092,315,728.5	102,483,229,063.33
2	**XAUT** Tether Gold Tokens XAUT	**$2,983,929,943.04**	$3,386,872,198.39	712,747.09
3	**AUSDT** Alloy Tether	**$49,944,765.73**	Not available	50,020,647.05

Data source and methodology

DORRS issuer API: Get Issuer Info. Data captured 2026-10-12T12:00:58.819Z. Website research completed 2026-10-12T12:01:19.559Z. Values are point-in-time observations, not historical reconstructions.

Market cap, FDV, circulating supply and status are shown only when provided explicitly by the API. Not available does not mean zero. One combined table shows at most 20 instruments. Positive FDV values rank first, highest to lowest. If fewer than 20 instruments have positive FDV, remaining places are filled with positive market caps among the remaining instruments, highest first, then positive total supplies. Zero, missing or invalid values trigger the next metric; instruments with no positive value are omitted. Each instrument appears once, with symbol as the tie-breaker within a tier. No mixed-token supply grand total is computed because units differ. Holder counts are as reported by DORRS; they are not asserted to be unique people. Monthly transfer volume is the API-reported monthly measure.

Network market-cap shares are shown only when every network value is available and the sum reconciles to the issuer market cap within 0.1%. Token-network details supply explicit market caps when a separate aggregate is absent. Availability flags identify unvalued instruments, including reported zero contributions. Legacy per_network values remain separate API-reported values and are not used to infer market cap.

Asset classes: Commodity, Stablecoin. Website statements describe the issuer's published claims and may differ from DORRS classifications. This report is informational research and does not recommend an investment.
