Asset overview

Tether is a technology company that issues stablecoins, primarily USDT, which is pegged to the US dollar. Its stablecoins aim to provide a digital alternative to fiat currencies and facilitate faster, cheaper, and more secure transactions on various blockchain networks.

At a glance

Platform	Tether	Instrument	Stablecoins
Networks	Ethereum, Polygon, Avalanche, Solana, Linea, celo, Mantle, gnosis, sei, fraxtal, near, mantra, aptos	DSIN	DSIN-302813296

Latest recorded trade

Price as reported	Quantity	Trade time
1.0004525738769300	0.033696	2026-11-19 03:10

A recorded trade is separate from the reference spot price. Currency and time zone follow the source.

About this snapshot

Sources: DORRS registry and blockchain analytics; CoinGecko reference pricing. Collected 2026-11-21 13:00 UTC. Source timestamps may differ. Missing values remain unavailable.

Transfer value measures on-chain movement, not exchange trading volume. Holder addresses are not unique investors. TVL, deployment value and token market cap are separate measures. Reported changes use the source's comparison period; a reported 0% does not establish that a prior-period observation exists. Cross-network values may include bridged representations.
